

SOHITH KANCHARANA

+919381536325 — sohithkancharana@gmail.com — <https://www.linkedin.com/in/kancharana-sohith-5b17461a0>

Summary — Senior AI Engineer-Chatbot Developer with 3+ years of expertise in conversational AI, intelligent automation, and data-driven solutions. Skilled in building bots across multiple platforms including Kore.ai, Dialogflow CX, and MCP (Model Context Protocol), with deep expertise in Retrieval-Augmented Generation (RAG) and LLM integrations (Gemini, OpenAI). Experienced in deploying scalable AI solutions on Google Cloud Platform (GCP), integrating bots with memory and context-aware systems, and delivering enterprise-grade customer engagement platforms. Adept at designing conversation flows, server automation playbooks, and CI/CD-driven deployment pipelines across Banking, Financial Services, and Enterprise domains.

Skills

- Python — Machine Learning — Dialogflow CX — MCP (Model Context Protocol) — RAG Systems — GCP — Gemini LLM — Vector Databases — Kore.ai — Power BI — Bitbucket — HTML — JavaScript — Excel — PowerPoint — Service Now — SQL — Ansible — GIT — CSS — Splunk — Data Wrangling — NLP — REST API — Playbook Automation — Ansible — CI/CD

Experience

Programming.com

5 June, 2025 – Present

AI Engineer

- Developed customer-facing chatbot using Google Dialogflow CX, enabling seamless business service access.
- Built MCP (Model Context Protocol) Agents and Server for Agentic AI, enhancing intelligent automation.
- Implemented RAG pipelines for bots to query internal knowledge bases and return contextual, source-linked answers.
- Designed and integrated memory maps for context retention and retrieval, improving multi-turn conversation accuracy.
- Leveraged GCP for deployment and Gemini LLM API for advanced conversational AI.
- Collaborated with cross-functional stakeholders to design scalable architecture and optimize chatbot performance.

LTIMindtree

23 August, 2022 – 23 May, 2025

Senior Software Engineer

- Developed and deployed chatbots using Kore.ai and Dialogflow, including intents, entities, and conversation context flows.
- Integrated bots with REST APIs and enterprise systems to automate ticket creation and IT support workflows.
- Built Ansible playbooks for server automation tasks such as upgrades, log cleanups, and patch deployments, reducing downtime risk.
- Implemented CI/CD pipelines (Git/Bitbucket) to promote chatbot files across environments and ensure smooth production releases.
- Conducted bot performance reviews with analytics and A/B testing, driving improvements in accuracy and user satisfaction.

Projects

RAG-powered Conversational Bot (Programming.com)

- Built a chatbot integrating MCP Agent, memory maps, and RAG pipelines for intelligent knowledge retrieval.
- Enabled retrieval of relevant documents with source-links and contextual answers.
- Deployed on Google Cloud with Gemini API for LLM-powered responses.

Chatbot Development (LTIMindtree)

- Developed and deployed Kore.ai and Dialogflow-based chatbots to automate ticket generation, server upgrades, and support workflows.
- Designed robust conversation flows, entities, and context logic to manage dynamic user queries across multiple domains.
- Implemented NLP-driven responses, using JavaScript, HTML, and CSS for a seamless cross-platform chatbot experience.

Topic Modelling (LTIMindtree)

- Built a Python-based topic modelling solution to classify and prioritize IT support tickets using TF-IDF, LDA, and keyword extraction.
- Enhanced operational insights by identifying emerging themes and enabling real-time ticket routing.
- Led to 25% reduction in resolution time and 2x increase in SLA adherence.

Server Automation (LTIMindtree)

- Developed Ansible playbooks for server upgrades, log cleanups, and patch deployments, integrated with chatbot flows.
- Reduced downtime risk and increased release velocity by automating 70% of repetitive server-side tasks.
- Created fail-safe rollback scripts, minimizing change-related errors and ensuring business continuity.

Achievements

Hack the Future 2.0

- First prize in LTIMindtree's Hackathon for developing a Smart Virtual Assistant, Infoverse, which utilizes a document search feature, Confluence search, and Internet search for a comprehensive knowledge retrieval system.
- The solution addressed critical challenges like manual touchpoints, developer efficiency, and ethical AI use.
- This application uses Streamlit UI and generates section-based responses using Confluence API and Granite LLM and WatsonX feature of IBM.

Awards & Certifications

- Received certification for AWS Cloud Practitioner in cloud certification.
- Received 'I Win Spot Awards' for being a better coach and team player in 2023.
- Obtained Oracle Java SE11 certification.

Education

- **2018–2022** – Bachelor of Technology in Production Engineering, NIT Trichy – CGPA: 8.84
- **2016–2018** – Intermediate (12th) in MPC, Chaitanya Junior College – Percentage: 98.1%

Additional Skills

- **Problem-Solving & Analytical Abilities:** Strong capacity to identify issues and implement effective solutions to enhance system performance.
- **Communication & Collaboration:** Excellent communication skills with a proven ability to work effectively in a team-oriented environment, fostering collaboration across cross-functional teams.
- **Project Management:** Demonstrated ability to manage multiple projects simultaneously, prioritize tasks efficiently, and meet deadlines consistently.
- **Quick Learner:** Passionate about staying up-to-date with the latest DevOps trends and technologies to continuously improve processes and technical expertise.

Declaration
