

SOHITH KANCHARANA

📞 +91 9381536325 — ✉️ sohithkancharana@gmail.com — 🌐 sohith-kancharana.vercel.app — 🔗 linkedin.com/in/kancharana-sohith-5b17461a0

Professional Summary — Senior AI Systems Engineer with 4+ years of expertise in conversational AI, intelligent automation, and data-driven solutions. Skilled in building bots and agents across RingCentral AIR PRO, Kore.ai, and Dialogflow CX, with deep expertise in RAG, LLM integrations (Gemini, OpenAI), and MCP (Model Context Protocol). Experienced in deploying scalable AI on GCP, memory and context-aware systems, and enterprise customer engagement platforms across Banking, Financial Services, and Enterprise domains.

Key Achievements: Automated 70% of repetitive server tasks, reduced ticket resolution time by 25%, 2× improvement in SLA adherence, RAG systems handling 100+ users daily, first prize among 50+ teams in Hackathon.

Technical Skills

Programming Languages: Python, JavaScript, React.js, SQL, HTML/CSS, Java

AI & Machine Learning: Machine Learning, NLP, RAG Systems, Vector Databases, Gemini LLM, MCP (Model Context Protocol), OpenAI, TensorFlow, Scikit-learn

Cloud & DevOps: Google Cloud Platform (GCP), AWS, Git, Bitbucket, Ansible, CI/CD, REST API, Docker, Kubernetes

Chatbot Platforms: RingCentral AIR PRO, Kore.ai, Dialogflow CX, Microsoft Bot Framework, IBM Watson

Tools & Analytics: Power BI, Splunk, ServiceNow, Excel, PowerPoint, Data Wrangling, Jupyter Notebooks

Experience

RingCentral

April 2026 – Present

AI Systems Engineer

- Developing enterprise support bots and AI agents on RingCentral's AIR PRO platform, designing use cases for Support and Advanced Support Bots serving premium customers across complex issue domains
- Engineering backend webhooks and REST API integrations to power bot use cases, enabling real-time data exchange between AIR PRO and enterprise systems
- Architecting optimal conversation flows leveraging LLMs, prompt-based skills, and custom code execution to deliver accurate, context-aware responses at scale
- Building AI-driven automation tools and in-house systems to streamline engineering workflows, improving team productivity and reducing manual effort across operations

Programming.com

June 2025 – April 2026

AI Engineer

- Built customer-facing chatbot using Google Dialogflow CX, processing 500+ daily queries with 95% accuracy; established MCP Agents and Server boosting automation efficiency by 40% across 10+ workflows
- Delivered Jira MCP Agent enabling organization-wide lookup of tickets, projects, delivery details, and summaries; developed "Account Plan Generator" (React.js UI) generating PPT/PDF from Salesforce data with one-click export for sales pitch readiness
- Engineered RAG pipelines retrieving 1000+ documents with source-linked contextual answers, improving knowledge base accuracy by 60%; authored memory maps elevating multi-turn accuracy from 75% to 92% across 15+ sessions
- Deployed scalable AI on GCP using Gemini LLM API managing 1000+ daily calls at 99.5% uptime; partnered with 5+ cross-functional teams achieving 35% reduction in customer support tickets

LTIMindtree

August 2022 – May 2025

Senior Software Engineer

- Crafted and deployed 8+ production chatbots using Kore.ai and Dialogflow, handling 1000+ daily interactions with 20+ intents and 50+ entities across 3 domains
- Integrated bots with REST APIs and ServiceNow, automating 500+ ticket creations per month and reducing manual intervention by 80%
- Designed Ansible playbooks reducing server deployment time by 70%, covering 50+ servers across dev, staging, and production
- Established CI/CD pipelines (Git/Bitbucket, 20+ monthly deployments, zero downtime, 98% success); executed performance analysis with Power BI and A/B testing, achieving 45% improvement in user engagement over 6 months

Projects

RAG-powered Conversational Bot (Programming.com)

- Constructed chatbot architecture integrating MCP Agent, memory maps, and RAG pipelines, indexing 5000+ documents for intelligent knowledge retrieval
- Achieved 85% relevant document retrieval rate with source-links, reducing search time from 5 minutes to 10 seconds per query
- Hosted production environment on Google Cloud (Cloud Run + Cloud Storage), managing 500+ daily queries using Gemini API with \$200 monthly budget

Jira MCP Agent & Server (Programming.com)

- Delivered Jira MCP Agent and MCP Server for organization-wide access: users look up Jira tickets, projects, delivery details, and ticket summaries with full ticket details for all users

Account Plan Generator (Programming.com)

- Built React.js UI for sales team: PPT/PDF from Salesforce and web search; preview with chat to tweak; one-click generation for immediate sales pitch readiness

Chatbot Development (LTIMindtree)

- Produced and deployed 5 enterprise chatbots on Kore.ai and Dialogflow, automating 2000+ monthly ticket generations and reducing manual workload by 75%
- Architected conversation flows with 15+ intent categories and 30+ entity types, handling diverse queries across IT, HR, and Finance domains
- Created responsive UI components using JavaScript/HTML/CSS, ensuring 100% cross-browser compatibility and accessibility compliance

Topic Modelling (LTIMindtree)

- Produced Python-based ML system classifying 5000+ tickets using TF-IDF and LDA algorithms, achieving 88% accuracy across 8 topic categories
- Introduced real-time ticket routing system identifying 12+ emerging themes, enabling proactive issue resolution and trend analysis
- Attained 25% reduction in average resolution time (from 12 hours to 9 hours) and doubled SLA adherence rate from 45% to 90%

Achievements

Hack the Future 2.0 - First Prize Winner

- Secured first place among 50+ teams in LTIMindtree's Hackathon by creating Infoverse, a Smart Virtual Assistant with unified knowledge retrieval across Confluence, web search, and document sources
- Tackled enterprise pain points by eliminating 300+ monthly manual touchpoints, boosting developer productivity by 40% through intelligent document discovery
- Architected Streamlit-based UI handling 200+ daily users, integrated Confluence API with Granite LLM (IBM WatsonX), achieving 90% query satisfaction rate

Awards & Certifications

- AWS Cloud Practitioner Certified (2023) – Validated expertise in cloud infrastructure, services, and best practices
- I Win Spot Awards (2023) – Recognized as exemplary coach and collaborative team member, mentoring 3+ junior engineers
- Oracle Java SE11 Programmer Certified (2022) – Demonstrated proficiency in Java development and object-oriented programming

Education

- **Bachelor of Technology in Production Engineering** – National Institute of Technology (NIT) Trichy – 2018-2022 – CGPA: 8.84/10.0
- **Intermediate (12th Grade) in Mathematics, Physics, Chemistry** – Chaitanya Junior College – 2016-2018 – Percentage: 98.1%

Additional Skills

Technical Leadership: Led 5+ enterprise chatbot implementations, mentored 8+ junior developers, conducted 25+ technical training sessions

Project Management: Managed 15+ concurrent projects with \$2M+ budget, delivered 100% on-time completion rate across all initiatives

Problem Solving: Resolved 200+ critical production issues, implemented preventive measures reducing system downtime by 60%

Communication: Presented technical solutions to C-level executives, authored 20+ technical documentation guides

Soft Skills: Cross-functional collaboration, Agile/Scrum methodologies, Stakeholder management, Technical mentoring, Process optimization
